## Key Figures

## BÜTTELBORN A PLACE FOR LIFE, LIVING, AND WORK

The municipality of Büttelborn made it its task to harmonize the cornerstones of “commercial development” and “social life”. Büttelborn has existed in its present form since 1977. Back then, the formerly independent communes of Büttelborn, Klein-Gerau, and Worfelden were merged together. The three districts are both characterized by agriculture and their central location within the Rhine-Main region. Two Autobahn connections in immediate proximity provide excellent accessibility and therefore location advantages for local trade. Companies from different industries, e.g. development, logistics, production, and distribution, have settled down here; however, service providers also value Büttelborn’s benefits.

As a worldwide leading manufacturer of wireless heart-rate measuring devices, **Polar Electro Deutschland** markets wearables, such as sport watches, training computers, and activity trackers, to athletes at all performance levels and supports them in the attainment of their athletic goals.

„With precision, passion, and more than 25 years of experience, we offer the entire bandwidth for trade fairs and events. From planning and logistics to construction and breakdown, all the way to event support, we provide everything from a single source and individually tailored to customers’ requirements. With our new location in Büttelborn/Klein-Gerau, we are centrally located next to the Autobahns, which connect us to the most important trade fair locations.“

Mike Wolf, Managing Director  
IMT Veranstaltungstechnik GmbH

„Since the founding of the subsidiary in 1991, our office in Groß-Gerau has now called Büttelborn home for many years. The exceptional infrastructure as well as the central location provide us with the ideal conditions for the successful marketing of our products.“

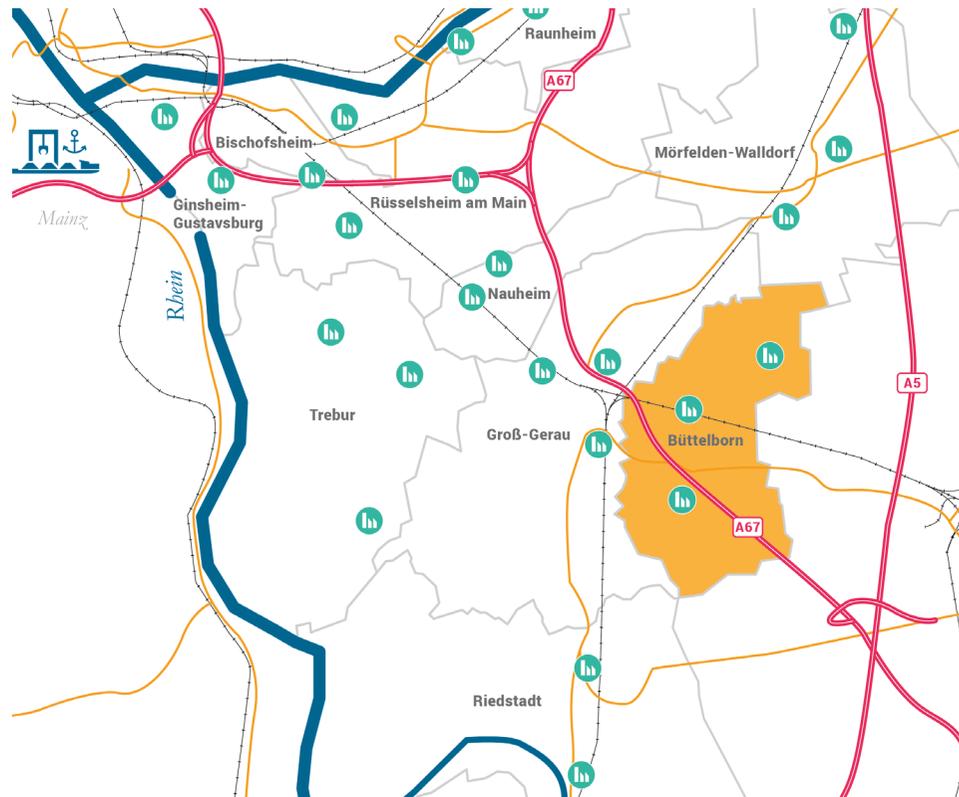

Lars Adloff, Country Manager  
Polar Electro GmbH Deutschland

The company **TBK** was founded in 1997 as a construction office. Customers come from, above all, the automobile industry, especially in the areas of rims, tires, and wheel sets, but also from the pharmaceutical industry as well. Not only are new plants developed, but existing plants and systems are modified. Per request, maintenance and servicing are also taken over by the company. Its customers include renowned automobile manufacturers from around the world.
